

AT LAST, FUNNELS TO SEPARATE WATER FROM FUEL

Mr Funnel is the brand of a new range of USA-made funnels which boast the definite advantage of being able to separate water out of any fuel. They work with petrol, two stroke, diesel and kerosene.

Called the Fuel Filter Funnel the procedure is achieved by the use of special filters located above a sump so that when the liquid is poured into the funnel the water goes into the bottom and the filtered fuel goes into the tank. After each use, the funnel is simply turned upside down so the water and dirt can be shaken into a waste container.

A tough plastic body is available which has a coated stainless steel filter for long-term durability.

The range is available in four sizes with the biggest having dual filters for increased flow speed and a deeper sump to ensure the dirtiest fuel can be handled.

The range of Fuel Filter Funnels is available from Pro Quip on (03) 9761 1110
