

▶ GO WITH THE FLOW

Dirt and water are practically unavoidable in stored fuel and can cause microbial growth, electrolysis and rust.

The Mr Funnel fuel-filter funnel has a flouropolymer-coated stainless steel filter that keeps a variety of fuel contaminants out of fuel tanks.

Only filtered fuel flows through to the engine, improving its efficiency, durability and operation.

There are seven fuel filters in the Mr Funnel range, with sizes varying according to capacity and flow rate. They suit implements ranging from a leaf blower to a bulldozer.

The smallest filter can handle 10 litres a minute and the largest can cope with 45 litres a minute.

WHERE TO GET IT: phone Pro Quip International on (03) 9761 1110.
